DEFINITION OF DONE

When you are "done", the following should be true:

- The code is compilable
- No warnings from FindBugs.
- STAN shows no signs of bad structure/architecture
- 90 % code coverage (unit tests) (android related code excepted)
- The code contains javadoc with:
    - a proper description
    - @author-annotation in classes
    - @param-annotation in methods
- Peer review - at least one other team member should check your code
- A license notification should be present in all .java-files
- Your work is documented via commit-messages (it should be possible to summarize the changes you made in the header, so do commits frequently)
- Update user manual if appropriate.
